

I am very concerned about FCC licensing of BPL (Broadband-Over-Power-Line) transmissions without very serious consideration for what effects such transmissions will have in the High-Frequency radio spectrum.

I am an Amateur Radio Operator (KT5OK), and I am but one of the millions of Hams who routinely use the HF frequencies not only for entertainment, but for emergency purposes, also.

Please do not compromise our ability to use those frequencies. Remember, when all other forms of communication fail, Ham operators are still depended upon to provide the vital link in times of emergency. With the present and constant concern over national security, it is extremely important to leave our avenues for emergency communications intact.
