

BPL or PLC as it is known, will be detrimental to every service that uses the radio spectrum; whether it be commercial, military, public safety or whatever. Practical studies done on the available radio spectrum where BPL is being tested already exist and clearly demonstrate its' potential to disrupt radio services. The fact that several countries in Europe and Japan have banned its' use should be waving a red flag before the eyes of the Commission. Alternative resources for gaining broadband Internet access are already available; making BPL a disruptive mistake.
