

JUST SAY NO TO BPL!!!!!!!!!!!!!!!

I have just seen and heard the results of what BPL will do to the Amateur Radio Hobby.

I do realize, that in today's times, we need to keep up on technology but this would be a major step backwards for most communications.

If this does go through it will also effect Military use of HF frequencies, some emergency communications and even AM broadcasting also, from what I have heard.

Rather than looking to make a "quick Buck" these companies, and our governmental agencies, should first determine what will be lost.

Some AM stations will be wiped out.

We share a lot of frequencies with the Military on HF.

Emergency communications on certain frequencies will be gone also.

Most traffic is sent in Morse code out of disaster areas.

Rather than stating that contesting will be gone, as we know it, let us think about that communications that will be lost. Contesters and "rag Chewers" need to unite as one to save the frequencies that ALL Amateur Radio Operators share around the world.

I for one believe that the FCC needs to not allow BPL. There are current rules that state that HARMFUL INTERFERENCE is not allowed. Why is the FCC thinking of breaking IT'S own rules? \$\$\$\$\$

How about ALL "hams" not paying their electric bills for a month and see what these companies think about BPL then?

What about solar panels if BPL goes through?

HMMM...I wonder if generators are on sale?

This hobby has thrived through all the innovations of the past, but none have been this much of a threat to our community.

DO NOT ALLOW BPL EVER!!!!!!!!!!!!!!!
