

Broadband over powerlines. Will have a negative devastating impact on amateur radio.

In natural disasters amateur radio is the only means of communication before, during and

for a long time after the event.

Broadband through unshielded cables will raise the noise floor to a level that will

prevent any effective uses of amateur radio..

With hundreds of thousands of volunteers who are amateur radio operators, who donate their

time and equipment during times of crises.

Governments should be protecting this valuable human resource.

Broadband is a Bad Idea, fueled by the commercial interests with no consideration of the amateur community
