

I am opposed to BPL - Docket - 03-104. I understand that this technology will create strong interference from 2 to 80 MHz. Being a HAM operator this falls into my primary operating frequencies. The noise level as a result of BPL will make it next to impossible to exercise my HAM operator rights granted to me by my licence from the FCC. There are already too many sources of outside interference now. HAM operators are an integral source of communications during emergencies and their rights should be protected.
