

This is in regards to Broadband over Power Lines. After listening to a Japanese sound recording and the ARRL's sound recording of the interference caused by BPL, I wonder whose bonehead plan this was. BPL will certainly put an end to the use of the HF and lower VHF spectrum as we know it today.

Please think about what you are doing! BPL will destroy the amateur radio use, the military use, and the Homeland Security use of the HF spectrum.

I urge the FCC not to allow BPL to be implemented in any way whatsoever. There has to be a better way to get broadband services to people without destroying the amateur radio community in the process.
