

I believe that BPL would represent a serious hazard to communication capabilities on the 2-30 Mhz portion of the spectrum.

Part 15 operations on 433 Mhz and 2.4 Ghz already cause problems and make operation on those portions of the spectrum difficult for my amateur radio activities.

More and more broadband activities allowed, without regulatory control, will create chaos within the proposed spectrum. You can not rely on the unlicensed spectrum users to police their own activities.
