

I am very concerned about the serious negative affects of BPL. My wife wears a cochlear implant, a good friend wears a heart monitor/defibrilator, BOTH are seriously affected by RFI, and yes, at the frequencies that you are considering. We had to move once already to a neighborhood less affected by RFI, there is a large power line right in front of our house, will you make us move again?

Is our technically challenged FCC going to be influenced by money and political lobbyists or will you represent the public interest?

Listen to the engineers who are not influenced by the power companies! Listen to those who understand the ramifications of RFI (like the American Radio Relay League)! Stop this stupid idea of sending another source of harmful Radio Frequency Interference to close proximity of everyone's home.
