

I hold a General class Amateur Radio license and have used High Frequency bands for the last ten years. I hope to upgrade to Extra Class to have access to more of the High Frequency spectrum.

I viewed the ARRL video made during the field trials and was appalled by the heavy interference generated by the use of Broadband Data transmission over power lines causes to Amateur Radio. I hope the FCC does not approve and authorize the use of power lines for data transmission.

Sincerely,

Alfred Pavao, KD6EFV
