

To Whom It May Concern:

I am very concerned about the potential interference that BPL may cause to existing radio services. I am a licensed radop amateur and am especially concerned about the degredation of the amateur HF bands if BPL is implemented.

Please consider carefully the impact BPL will have. Unprotected power lines actually broadcast the signal carried on them. Even shielded CATV systems have problems if connections are not electrically sound. How much more would unshielded power lines "leak" the signals carried on them?

BPL is just one Big Packet Leak ready to happen. Please do not allow BPL in this country.
