

As a frequent supplier of communications to the Huntsville Track Club for the long-distance races (26 miles through the neighborhoods of Huntsville). I am objecting to the authorization of BPL, Broadband on Power Lines. This will make the Amateur Radio activity supporting these activities useless.

BPL may provide the power companies a new source of revenue, but at the cost of damaging emergency communications for the Red Cross and the U. S. Weather service during tornado emergencies, which we have frequently here in North Alabama.

Please don't let it happen!
