

I am writing you today, to declare my opposition to the proposed nationwide "BPL" implementation scheme.

I have recently become aware of empirical evidence that was recently performed by ARRL (American Radio Relay League) staffers in just one BPL "Greenhouse" community. From this single sampling of evidence, I can see that the end of HF radio reception as we know it (literally interference-free) - will soon come to an end.

I have been licensed in the Amateur Radio Service for 29 years and with the possible implementation of BPL, it appears to me to be the greatest interference threat to the HF Amateur Radio bands, not to mention those of the Military and FEMA, that I have ever witnessed. With that said, let's not compromise what has been the cornerstone of amateur radio operations, since the beginning of the radio service - 'Emergency Communications'.

Please continue on your path in protecting the frequency spectrum for consumers, from 'all' types of invasion.

Sincerely,

Jon E. Pearl
