

We do NOT need BPL technology in our country! High-speed wireless internet access is already being made available in the 2 GHz range, there is no need to whipe out the 2 to 80 MHz range of the spectrum to get the same thing. The tests made by Japan and also by the ARRL in our country have shown us that all HF communications users will be wiped out if BPL is implemented. This would include Red Cross, Department of Defense, National Guard, and Amateur Radio communications. This is completely at odds with Homeland Defense! Our country is under attack by international terrorists, we need local HF communications for backup of cellular telephone systems, and BPL would destroy all of that. BPL will be disastrous to Homeland Defense. Please do not allow it to progress in our country.
