

BPL, per the ARRL data sampling, will be disastrous to High Frequency Amateur Radio operation in the United States. As a long time radio amateur with much personal time and money invested in the hobby I object to the implementation of BPL. It appears that I will be impacted, and that I would also impact BPL users. The power companies that are proposing this are either mis-informed or lying about it's EMI issues. Since there is much other activity on the HF spectrum, I would imagine other current users of these frequencies will be harmed also. If BPL is to be allowed it must be done meeting whild meeting the requirements of all users of the 2 - 80 Mhz spectrum, not just the power companies.
