

I am strongly against the use of Broadband Over Power Line (BPL).

Because it uses frequencies between 2 and 80 MHz. AND it would turn the power grid system into a giant antenna causing interference to countless users of the HF and low-VHF radio spectrum. Military, Amateur & Commercial services will be impacted. The "spectrum pollution" created by BPL is on a level that is difficult to imagine.

Please consider the work load of complaints your agency will also receive if this is not stopped.

Sincerely,  
Ray Shatzel
