

Lets see, the BPL/Power Companies/proponents say there is no interference issue. Yet, the ARRL, through their testing, says that there IS interference to the High Frequency Bands. ANY interference is no good. It will affect ALL users of "HF": Government, Home Land Security, Commercial/business, Amateur, EVERYONE. DO NOT allow "BPL" to be implemented. At the very least, look at ALL data presented before deciding. Don't take the word of the "fox" that the key to the hen house will be safe with him.

Thank you for your time
