

We all know how beneficial amateur radio is to public service and how much the HF bands need to remain to be usable. This will affect any shortwave reception whether it's amateur radio or shortwave broadcast, military radio or otherwise. I have seen a demo on BPL that demonstrated the abhorrent affect on radio reception. We must not let this go forward as it will be devastating for many services and virtually render these services useless.

Thanks for your time,  
Charles Menard
