

Please do not proceed with BPL aproval until further testing is done on these potentially defastating transmissions. I support the ARRL comments on this Docket.

BPL stands to violate existing FCC non-interferance rules to existing users of frequencies between 2MHz and 80Mhz, including almost the entire Amateur Radio HF bands. This would be defastating to us in this service, and to all the people and agencies that we serve.

Thank you for your considerations,  
Scott E. Thile, K4SET  
Director, RadioMinistries
