

I have done extensive reading and research on the Broadband over power lines initiative.

I am very opposed to the proposal on the grounds of the interference it will cause to other legitimate and licensed uses of the HF frequency band. It is my understanding that the FCC is responsible for protecting all legitimate uses of a given frequency, and yet this is clearly an example of one application being given priority over another.

I tend to be pro-business, but in this case I believe that this proposal from the power industry should not be approved. I have never filed a comment with the FCC before, but I feel this proposal should be denied.

I hope you will make the right decision and deny this application.

Thank you for your time.
