

I am against the BPL. The power grid is not a closed circuit like cable TV. Are there no capable technicians at the FCC anymore. If this is allowed the power grid will become one big antenna. Jamming everything from 2 to 80 Megahertz. We are rapidly running out of RF spectrun as it is and your proposing to let the power companies effectively turn off 100% of the frequencies capable of long distance communications. HELLO somebody WAKEUP before the power grid becomes one big white and pop-corn noise genetator and the VLF LF MF HF and VHF bands.
