

I fully support the ARRL comment submitted regarding Docket ET 30-104. If Broadband over Power Line (BPL) is implemented, it will render useless the spectrum currently occupied by duly licensed services that depend on weak signal communications. All licensed services will be irreparably harmed and affected. This is in direct conflict of the FCC's mandate to regulate the natural resource of our electromagnetic spectrum. Implementation of BPL is in direct conflict with the public interest, and certainly not in our national defense interest.
