

This is a comment expressing my concern that BPL technology will result in serious interference to all radio services in the HF spectrum. Any relaxation of the interference standards is unacceptable and will result in serious interference to Amateur Radio Operators. As an Electrical Engineer I find BPL technology a poor solution for high speed internet connections to homes. Better technology than BPL that will not damage our radio spectrum should be implemented. Please do not allow BPL or similar services to destroy the HF radio spectrum.
