

The Broadband over Power line idea is an idea that should die. It will only generate undue interference to other services.

Any time you send a signal over an exposed conductor, it WILL radiate. You don't use open wire or twin lead wire for you TV reception these days because they become susceptible to stray signal pickup and the reverse is true as a transmitting lead.

The proposed service will spell the "Death Kneel" to HF services like Amateur Radio. DON'T LET IT HAPPEN!
