

I strenuously oppose the use of BPL because of the tremendous interference it causes across the entire HF spectrum and the lower part of the VHF spectrum. I realize that the proponents of BPL deny this interference, but repeated tests have proven that tremendous interference is generated when BPL is employed and that the interference is severe enough to wipe out all but the strongest of signals. I urge the FCC to forbid or severely restrict BPL so that this problem of interference from its use is completely eliminated.
