

BPL would cause numerous problems with rf interference to other services. The present condition of our power supply physical plant is in very poor condition which would add to the interference. Decaying physical plant at present is causing enough interference to consumer electrical and electronic devices. I have seen recently that verizon plans to run fiber to all of their customers homes during the next 10-15 years. This is the answer to widely available broadband access but without the potential of interference. Please consider not allowing BPL to be used.
