

Dear FCC,

In regards to the Broadband over Power Line, I wish to make known my opinion that as an Amateur Radio operator, BPL will cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range, this does affect commercial operations and military operations, hurricane networks, lost persons in the US.

Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.

I fully support the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I conclude the comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time.

I think further research and innovations in BPL is needed to avoid the great risk this innovative technology will incur.

Thank you for you time.

Electronically Signed,
Richard Jones
