

I completely support the comment made by The American Radio Relay League regarding Docket ET 03-104. Broadband Over Power Lines is a technically unsound and extremely dangerous proposal. It has the clear & likely potential to cause massive disruption of all other services using the HF spectrum. This is clearly a case of an industry placing greed ahead of the interest of the public. If allowed to be implemented, this "service" would be nearly impossible to retract or control & would put our nation in great peril due to the damage it would present to radio communications in an emergency situation.
