

Gentlemen: The allowing of Broadband over powerlines will completely destroy my own two hobbies which are Shortwave Listening and Amateur Radio for 56 years. I participate in emergency communications for the Air Force as a member of MARS and this service is integral to the disaster preparedness plan for the Air Force. Please consider the impact of your decision very carefully. The Power Companies are only interested in making more money and have no care for those of us who would suffer as a result of allowing this to happen. Thanks, in advance, for allowing the people to comment.
