

I am concerned about the BPL's interference to amateur radio. AR has had a very positive impact on various communication issues throughout its history. If this form of communications was restricted by BPL interference, the help hams could provide would be decreased. The need for this emergency and communications alone out weight the benefits of having internet access over the power lines. We can already get high speed internet into every home via cable and telephone lines.

The only one to benefit would be the power companies by providing you with this service. maybe in the future when shielding because better this may be feasible,  
but not until then.

Thank you and please consider these thoughts and others before making a decision they could destroy AR in the US.
