

As City Radio Officer for Santa Clarita, California I am deeply troubled by the potential adverse effects that this proposal would have on Radio Frequency interference on our radio service frequencies in the 2-80 Mhz. radio bands. Relaxing the current rfi restraints by power companies could render our emergency ham radio bands worthless or at least severely degrade normal ham radio operations. I strongly oppose this and request that you vote down this issue. Thank you, Brad Marckwardt, N6KNW
