

I support fully the well founded Comment filed by The American Radio Relay League (ARRL) concerning Docket ET 03-104 and feel that the comments of the proponents of Broadband over Power Line (BPL) have little credible scientific data to support the approval of this Docket at this time. At the same time, the ARRL Radio Frequency Interference (RFI) department head Ed Hare W1RFI has been making tests in areas where BPL is in a testing phase and those tests show that BPL virtually destroys any communications conducted on frequencies between 2 and 80-100 MHz. This would not only affect Amateur Radio Service communications but U.S. Governmental, Military and Homeland Security communications as well. Can we afford that? I think not.

I do not support the Docket and will NOT support it until CREDIBLE studies show that it will not affect the frequency spectrum in an adverse way.
