

I am writing to urge that the FCC take no action that would reduce the power line radiation limits and oppose any additional implementation of BPL. This is an ill-concieved, un-tested technology and a proven source of un-wanted interference to other spectrum users. With multiple options for the provision of broadband service, it is inconceivable that this technology ( BPL ), which has been shown to cause harmful interference to other services, even be considered without proper testing, and without limits on harmful radiation. With the increased attention that will now be be focused on the existing, antiquidated power grids in this country, now is not the time to embark on an added burden that will certainly accompany implimantation this un-tested and harmful tecnology.
