

I understand that BPL will be a part 15 user. So it must accept interference from the Amateur Radio service at least on frequency bands assigned to that service. I have not heard of any actual tests of any interference and I think this will be needed if wholesale problems later on are to be avoided.

We of the Amateur Service will be accepting massive interference to our receivers from this service and it will end Amateur Radio as I know it now. Please listen to what the ARRL and others have to say.
