

My personal investigation and monitoring of a functioning BPL system indicates that the Comment submitted by the American Radio Relay League concerning Docket ET 03-104 are well founded and I fully support them. Furthermore, comments made by the proponents of Broadband over Power Line have NOT satisfactorily addressed the issue of interference to licensed services operating in the 2 MHz to 80 MHz frequency range. I have made personal measurements in the vicinity of one of the test systems and have seen proof that approval of ET 03-104 would violate existing FCC rules on non-interference to licensed services including Government, Amateur Radio, Commercial and other services.
