

I just got the information regarding the Broadband on Power Lines (BPL) situation and I am contacting you to express my dire concerns. Apparently by testing it has been found that BPL severely disrupts Amature Radio frequencies. This can not be allowed to happen! If the BPL providers/carrier can not provide this service without disruption to amature radio then it should be terminated and an alternate method of delivery should be used. There is enough disruption and interference on the amature radio bands as it is now, and every single day there is another threat to these bands, always some entity out there encroaching upon the bands, it is ridiculous that the amature radio organizations have to keep lobbying and petitioning over and over against these issues. Please, as the federal office in charge, protect the amature bands from harm. In doing so you provide us "hams" our space to operate and to SERVE our communities, states, and the nation in ways that no other "hobbiest" can. Sincerely, Norman Cox. KG4MTD
