

I support the comment submitted by The American Radio Relay League concerning docket et 03-104. I conclude the comments made by proponents of broadband over power line have little if any credible scientific data to support approval of this docket at this time or any time. Further research in BPL is needed to avoid the risk that this technology will not cause irreparable interference to services licensed to operate in the 2 mhz-80 mghz bands. Approval of docket ET 03-104 will violate the existing FCC rules on no-interference and would be contrary to the best interest of the public.

Please reconsider any decisions you may have on allowing this docket to go through.
