

I support the Comment submitted by the ARRL concerning Docket ET 03-104.

I believe that the proponents of Broadband over Power Line have no credible data to support approval of this docket at this time.

Much research is needed to evaluate the effects of BPL in its current configuration, and there will probably need to be substantial improvements in technology to make BPL peacefully coexist with the current licensed users of the MF and HF bands.

Approval of ET 03-104 would be contrary to the best interests of the public.
