

I am a concerned member of the Amateur Radio Relay League who is frightened at the prospect of Broadband over Power Line. I have read several articles on field tests done by radio enthusiasts that show unheard of interference in the 2-80 MHz frequency range.

Docket ET 03-104, if approved, would break most FCC rules of non-interference, interfere with emergency and public communications, and cause chaos in the radio community. Please reconsider this docket and tell the proponents to go back to the drawing board, because this idea, as proposed, is dangerous to the public.
