

As a Licensed amateur radio operator FCC call sign N0SMX, I wish to express my deep concern for the power line industry wanting to use power lines to transmit broadband technology over powerlines. This causes spectrum pollution to all types of radio services. Amateurs have proven their very valuable services in times of need. If this technology is allowed to continue this valuable service will be in great danger. Powerlines are not shielded cable to block unwanted emissions. The sheer number of miles and miles of these old leaking cables shows once again Huge commerce is looking for the cheap way to pocket easy money.. Please reconsider this easy way out for big business..... Dennis McKinney N0SMX
