

The use of BPL will cause massive interference over a wide range of the spectrum. It will make all HF and some VHF communications in the vicinity of power lines carrying BPL impossible. Amateur Radio has always been protected from this kind of harmful interference, and that protection has allowed Amateurs to provide effective emergency communication. Those of us who train to provide our communities with emergency communications will have our effectiveness weakened or completely destroyed. BPL will allow the already powerful utility companies to make even bigger profits and gain even more control over our daily lives. There are much better alternatives so please reconsider this action.
