

The FCC should not allow broadband over power lines because it has been proven that it will greatly interfere, to the point of completely eliminating, the amateur HF bands as well as many commercial bands. These bands are needed for emergency traffic. Amateur radio operators are the backbone of emergency communication services. Broadband over power lines will, in time, eliminate the entire amateur community, because amateurs will no longer have access to frequencies. I implore the FCC to do away with the idea of broadband over power lines.
