

I am opposed to the use of Power Lines for the distribution of broadband data services due to the adverse affect it will have on High Frequency (HF) amateur radio communication. Frequencies in the range of 2 to 80 Megahertz are commonly used for communications between radio amateurs world-wide. If BPL service is put in place, it would be permanently disruptive and would eliminate the capability to freely communicate over long distances using radio. This is a freedom I believe we need to protect.
