

BPL transmissions via ionospheric propagation and power lines acting as very long antennas could do serious damage to the HF spectrum worldwide and please remember that the spectrum is not owned by USA !

Since it takes very little signal to propagate on HF, it is guaranteed that the noise will be heard in other parts of the world, so it's why we are also concerned here in Europe.

It seems that the role of the FCC is to guarantee a clean spectrum for everybody, maybe first for the US citizens but don't forget the whole humanity !

Regards from Corsica Island, Mediterranean sea, Europe
Fabien BERNARDINI, TK5MH, Ham radio operator
