

I have reviewed and conclude that the supportive comments for Broadband over Power Line that have submitted by proponents of this technology are without creditable justification for implementation at this time. The risk that this technology will cause irreparable interference to services licensed to operate in the 2Mhz - 80 Mhz frequency range is just too great. Further research and innovation is required to assure that serious problems are not created. And further, approval of ET 03-104 would violate existing FCC rules. I believe approval would not be in the best public interest. By reference, I fully support the comments submitted by the American Radio Relay League regarding this matter.
