

Considering the lack of enforcement in the amateur radio service, in particular, the 10 meter band, 28.000 to 29.700 Mcs.

What are your plans to enforce this BPL?

The U.S. Congress has tasked the FCC to enforce, are you aware of that issue?

While 10 meters is going to hell with American truckers across this Nation with no license to operator in the amateur radio service, no enforce. My guess is this, the FCC wants MONEY and the enforcement issues will go away.

Have you folks given that ANY thought?

Create another service with zero enforcement? Yes Sir, it will happen.

More rules and regulations to be published on BPL and no enforcement.

Has anyone of you in the FCC approached Congress on the issue of enforcement your tasked with?

Create a new system, BPL, and it is a noise maker, you should be ashamed of yourselves.

Amateur Radio is now apart of Homeland Security and BPL WILL increase noise levels.

Here it is in a cracked nutshell:

Unleash BPL MONEY Greed and more Greed Create more noise No Enforcement

Just forget the emergency amateur radio operators. Same old US Government doing its best at nothing, money is your objective and it stinks, all for money.

Why are you FCC workers creating rules and regulations?

Why can't you enforce your creations?

An Agency with a paper, can't write the word.

Mr. FCC Chairman, better take a serious look at your enforcement department before you create something, as BPL and no enforcement.

Your enforcement department is a zero producing department.

NO BPL, NO BPL, NO BPL.
