

Dear Sirs,

are you aware of the interference that BPL will create? This ill conceived idea would wipe out ALL HF communication, not only amateur radio, but also military, governmental, and commercial two way radio in the HF spectrum. This is a very poor idea, and should be dumped asap. Just because the Computer Lobby has no knowledge of, or interest in, radio communications does not mean that they should be able to run roughshod over licenced users of this area of the spectrum. Please pay close attention to the evidence of the ARRL. Several other countries have already banned BPL because of the severe interference it causes. The FCC is bound by law to protect the spectrum from encroachment by unlicenced users. The FCC had better wake up and do it's job!

Thank you for your consideration.

Sincerely,

Geoffrey E. Haines, N1LGI
