

As an Amateur Radio Operator I oppose the possible rule changes by the FCC with regard to Broadband over Power Lines - BPL. I'm concerned about a number of issues; interference on HF and some VHF frequencies, interference with Cable TV, interference for short wave radio operation and unlicensed devices on BPL. There seems to be enough access to the internet via existing services such as; DSL, Cable Modems, T1 lines, dial-up phone. Why do we need more? The FCC promises the protection of Amateur radio frequencies. The FCC licenses me. I volunteer in Palm Beach County in Amateur Radio Emergency Service. We need clear, clean frequencies to talk on in the event of a hurricane or other disasters. I do not want BPL in my county, state or country.

Thank you,
Paula E. Stein
