

Please do not allow power companys to use Broadband over Power Lines B.P.L. technolgy. I feel it will cause major havock to the entire H.F. spectrumn. It will noise polute Amataure Radio and all other services using H.F. and low band V.H.F. frequencys.

I have heard the results of a mobile Amataure Radio test station near power lines that were using B.P.L. The signal strength and extreme noise made the stations receiver almost useless.

I am hopeing the F.C.C. follows the lead of the other countries that has banned this type of operation due to it's harmful noise polution on frequencys from 2 to 60 mhz.

Thank you for your consideration,

Phyllis A. Hatalski, Amataure Radio Station N4HVB
