

FCC Commissioner:

I have been an Amateur Extra Operator (WA4YTG) for over 38 years and wish to state my EXTREME opposition to Broadband over Power Line (BPL) due to its great potential for severe interference to HF and VHF radio communications.

It is inconceivable that the FCC would permit unshielded broadband communications over power lines that would have such a significant impact to radio communication. The FCC should be about protecting the HF and VHF spectrum and not allowing a low cost approach that could destroy one of our national treasures.

For the future use of the HF and VHF frequencies and their unprecedented value for communications, I request that you do not approve BPL!

Sincerely,  
Larry L. Brock  
WA4YTG
