

I am a "Ham" radio operator represented by the ARRL who fully voices my opinion on Docket ET 03-104. The potential threat of the crippling of usefulness of the RF Spectrum between 3 to 80 MHz. must be examined and NOT just rubber stamped for the powers to be. The broadband "noise" generated seems to render this spectrum next to useless. Not only "hams" use this but also many industries including the U.S. Government. Thank you! Mike Cegelski K8EHP
